Taking care of your risks

...always there

redcare

‘NIG advocate **redcare** - **redcare**’s investment in technology advancements and the levels of expertise are unparalleled in their field. NIG enjoy a good working relationship with **redcare** and will continue to recommend the system to NIG policyholders.’

NIG, General Insurer of the Year 2005

What makes **redcare** different from any other signalling system? Perhaps it’s the fact that **redcare** utilises a dedicated, duplicated network which has never been compromised. So you know that regardless of what happens, be it a line cut, intruder, attack or fire the Alarm Receiving Centre will always know and take the appropriate action.

redcare’s unique technology works using a BT landline or broadband connection to send an unbroken pattern of two-way signals from your premises to your Alarm Receiving Centre. If for any reason these signals are interrupted **redcare** will deliver a warning signal to your Alarm Receiving Centre who will summon the emergency services, and or keyholder, as required.

Key benefits and features of **redcare**

- No additional expense for a dedicated phone line, **redcare** will work on an existing BT landline or broadband connection, even if your line is busy.*
- There are no call charges to pay for the signals sent on your landline or broadband connection.
- **redcare** is compliant with British and European Standards for intruder and fire alarm signalling.
- **redcare** has Police Preferred Specification and Secured by Design accreditation. 
- **redcare** is listed and approved by the Loss Prevention Certification Board. 
- **redcare** guarantees delivery of alarms over a fully managed dedicated & duplicated network, regardless of loss of the signalling path.

*Lines sharing with data devices such as faxes or modems may require connection of a **redcare mcd (Modem Compatible Device)**. A **redcare mcd** allows **redcare** signalling and data transmission on the same BT phone line or broadband connection. You may experience a slight reduction in your internet connection speed. **redcare mcd** can be purchased via your alarm installer.
